

MARIZFIRST

Product Requirements Document (PRD)

Healthcare Appointment Discovery + Assisted Booking Platform

Document Purpose

This PRD converts the MarizFirst project idea into a detailed product, UX, functional, technical, operational, SEO, analytics, security, and launch requirement document for design, development, QA, and business execution.

Item	Detail
Product	MarizFirst
Product type	Patient-first healthcare discovery and appointment assistance platform
Primary conversion	Appointment request followed by WhatsApp/admin/partner confirmation
MVP model	Hybrid booking: patient selects a preferred slot, but appointment remains Pending Confirmation until admin or partner approval
Core users	Patients, doctors, hospitals, clinics, MarizFirst admin team
Version	PRD v1.0
Prepared for	Product planning, UX design, development, QA, and launch execution
Important positioning rule	Do not position MarizFirst as a discount/coupon website. Focus on trust, verified profiles, clarity, and assisted appointment support.

1. Executive Summary

1.1 Product Vision

MarizFirst is a healthcare appointment marketplace that helps patients discover verified doctors, hospitals, and clinics, review profile details, select a preferred appointment slot, and submit a booking request. The platform should not operate like a static doctor directory. It must behave like an assisted booking system where MarizFirst or the healthcare partner confirms the appointment before the patient visits.

Simple Product Statement

Find trusted doctors, hospitals, and clinics near you, choose a suitable slot, and get appointment support through MarizFirst.

1.2 Strategic Direction

- Launch as a focused production MVP, not a throwaway prototype.
- Start with one strong local market before expanding city-wise and speciality-wise.
- Prioritize verified healthcare profiles, operational reliability, appointment status clarity, and privacy-first patient data handling.
- Use hybrid confirmation instead of fake real-time auto-confirmation because healthcare availability often changes manually.
- Build SEO architecture from day one because doctor, city, speciality, hospital, and clinic pages are core acquisition channels.
- Use dashboards for admin and partners because the product depends on appointment operations, not only frontend pages.

1.3 Non-Negotiable MVP Decision

Hybrid Booking Is Required

Patients may select visible slots, but the appointment must remain Pending Confirmation until admin or partner approval. Full auto-confirmation should not launch until partner slot discipline is proven with real operational data.

2. Goals, Non-Goals, and Success Metrics

2.1 Business Goals

- Generate verified appointment requests for doctors, hospitals, and clinics.
- Build patient trust through accurate profiles, clear status messaging, and simple support.
- Create a monetizable partner network using listing plans, appointment commission, featured listings, and partner packages.
- Establish a scalable local SEO structure for city, speciality, doctor, hospital, and clinic discovery.
- Give MarizFirst internal control over appointment quality, partner confirmation, lead tracking, and content quality.

2.2 User Goals

User	Goal	Primary Product Requirement
------	------	-----------------------------

Patient	Find reliable healthcare options and request an appointment quickly.	Fast search, verified profiles, short form, visible slot selection, WhatsApp updates.
Doctor	Receive quality appointment requests without managing a complex system.	Profile page, slot management, scoped dashboard, appointment actions.
Hospital	Acquire patients across departments and locations.	Hospital profile, linked doctors, facilities, enquiry/booking CTA, reporting.
Clinic	Increase local discovery and appointment demand.	Clinic profile, local SEO, appointment request flow, partner dashboard.
Admin team	Control listings, appointments, leads, operations, SEO, and monetization.	Internal admin panel with appointment inbox, CRUD, roles, logs, analytics, and partner management.

2.3 Product Success Metrics

Metric Category	Metric	Why It Matters	Target Direction
Acquisition	Organic visits to doctor/city/speciality pages	Validates SEO architecture and local discovery.	Increase month-over-month after indexing.
Activation	Search-to-profile click rate	Shows search/listing quality.	Improve through better filters and cards.
Conversion	Profile-to-appointment request rate	Core business conversion.	Primary optimization metric.
Operations	Pending confirmation SLA compliance	Trust depends on fast confirmation.	Act within 15-30 minutes during working hours.
Partner quality	Confirmed/completed appointment ratio	Shows lead quality and partner fit.	Track by partner and speciality.
Trust	Reschedule/cancellation/no-show rates	Identifies unreliable slots or partners.	Reduce through better partner operations.
Retention	Repeat appointment requests by phone/email	Shows user trust and repeat usage.	Track after MVP launch.

2.4 Non-Goals for Phase 1

- Do not build a full EMR/EHR system.
- Do not build a mobile app before proving the web funnel.
- Do not launch teleconsultation or video consultation unless partner operations are ready.
- Do not build online payment until settlement and refund workflows are clearly defined.
- Do not publish reviews/ratings unless linked to verified completed appointments.
- Do not provide AI diagnosis, medical advice, treatment claims, or emergency-care promises.

3. Personas and User Needs

Persona	Situation	Pain Points	Required Experience
Patient - urgent but non-emergency	Needs a doctor quickly for a common health concern.	Unclear availability, too many options, trust concerns.	Fast search, simple profile, visible slot, WhatsApp acknowledgement.
Patient - planned consultation	Compares doctors/hospitals before booking.	Needs credentials, location, fee, experience, facilities.	High-quality profile pages, FAQs, location, transparent status.
Doctor partner	Wants appointment requests but has changing	Does not want complex software or unrelated	Simple slot management, request

	availability.	leads.	accept/reject/reschedule, scoped patient details.
Hospital partner	Needs department-level patient acquisition.	Multiple doctors, departments, locations, and operational teams.	Hospital profile, linked doctors, partner reports, appointment routing.
Clinic partner	Needs local patient discovery.	Limited admin bandwidth and local competition.	Local SEO page, simple profile updates, basic booking request handling.
MarizFirst admin	Manages quality, confirmation, partner updates, and lead conversion.	Needs operational visibility and control.	Dashboard, filters, status actions, notes, logs, notifications, analytics.

4. Product Scope and MVP Definition

4.1 MVP Modules

Module	MVP Requirements	Priority	Owner
Public website	Home, doctors, hospitals, clinics, specialties, cities, blog, contact, partner page, legal pages.	P0	Frontend + SEO
Doctor profiles	Fees, qualification, experience, registration number, location, languages, gender, slots, CTA, FAQ, schema.	P0	Product + Admin
Hospital profiles	Facilities, specialties, linked doctors, address, gallery, enquiry/booking CTA, schema.	P0	Product + Admin
Clinic profiles	Facilities, specialties, doctors/team, address, gallery, appointment CTA, schema.	P0	Product + Admin
Search and filters	Search by doctor, speciality, hospital, clinic, city, location, gender, fee, availability, experience where data exists.	P0	Frontend + Backend
Booking system	Slot selection, short patient form, consent, appointment status, admin/partner verification.	P0	Backend + UX
Admin panel	Manage listings, appointments, leads, partners, content, SEO, revenue fields, notifications, audit logs.	P0	Backend + Ops
Partner dashboard	Profile update, slot management, appointment accept/reject/reschedule actions, reports.	P0	Backend + UX
Notifications	WhatsApp	P0	Backend + Ops

	acknowledgement, confirmation, reschedule, cancellation, reminder, failure logs.		
SEO foundation	Dynamic metadata, sitemap, robots, schema, canonical URLs, city/speciality landing pages.	P0	SEO + Frontend
Analytics	Track search, profile views, slot selections, appointment submissions, confirmation outcomes.	P0	Growth + Engineering
Security	RBAC, ownership checks, validation, rate limiting, CAPTCHA/Turnstile, audit logs, backups.	P0	Engineering

4.2 Priority Definitions

Priority	Definition
P0	Must be built for launch. Without this, the MVP cannot function or creates unacceptable trust, security, SEO, or operational risk.
P1	Important shortly after launch or in late MVP if time permits. Improves conversion, operations, or scalability but not required for first live release.
P2	Growth feature after the core funnel is proven. Should not delay launch.
P3	Strategic future expansion. Only build after business model and operations are validated.

5. Information Architecture and Sitemap

Page / Area	URL Pattern	Purpose	Priority
Home	/	Primary search and conversion page.	P0
Doctors listing	/doctors	Doctor discovery with filters.	P0
Doctors by city	/doctors/[city]	Local SEO and location discovery.	P0
Speciality + city	/doctors/[speciality]/[city]	High-intent SEO landing page.	P0
Doctor profile	/doctor/[doctor-slug]	Main appointment conversion page.	P0
Hospitals listing	/hospitals	Hospital discovery.	P0
Hospital profile	/hospital/[hospital-slug]	Hospital lead capture and linked doctors.	P0
Clinics listing	/clinics	Clinic discovery.	P0
Clinic profile	/clinic/[clinic-slug]	Clinic booking request page.	P0
Speciality page	/specialities/[speciality-slug]	Education plus relevant doctors.	P0

City page	/cities/[city-slug]	City healthcare hub.	P1
Blog listing/detail	/blog and /blog/[blog-slug]	SEO, trust, patient education.	P0
Partner page	/partner-with-us	Doctor/hospital/clinic onboarding.	P0
Contact	/contact	Support and business enquiry.	P0
Legal pages	/privacy-policy, /terms, /medical-disclaimer, /partner-terms, /data-deletion	Trust, compliance, and risk control.	P0
Admin dashboard	/admin	Internal operations control.	P0
Partner dashboard	/partner	Partner profile, slots, and appointments.	P0

6. End-to-End User Workflows

6.1 Patient Booking Workflow

1. Patient lands on home, listing, city, speciality, hospital, clinic, or doctor page.
2. Patient searches by doctor, speciality, clinic, hospital, city, or location.
3. Patient reviews profile details: qualification, experience, fee, registration number if available, address, availability, FAQs, and trust signals.
4. Patient selects a visible preferred slot.
5. Patient submits name, phone, city, optional concern, preferred slot, and consent.
6. System validates the form, slot status, rate limits, and consent.
7. System creates or updates patient record.
8. System creates appointment with Pending Confirmation status.
9. System creates lead with source page and UTM data.
10. Admin and partner receive appointment request notification.
11. Patient receives WhatsApp acknowledgement that request has been received and is pending confirmation.
12. Partner or admin confirms, reschedules, or cancels.
13. Patient receives final WhatsApp update with appointment details or reschedule/cancel information.

6.2 Admin Appointment Workflow

14. Admin opens appointment inbox filtered by New/Pending Confirmation.
15. Admin reviews patient details, selected slot, source page, partner, and notes.
16. Admin checks if partner has responded within SLA.
17. Admin confirms directly if allowed, or contacts partner manually when needed.
18. Admin updates appointment status: Confirmed, Rescheduled, Cancelled, Completed, No Show, or Lost.
19. System sends the relevant patient/partner WhatsApp update.
20. System writes audit log for every status change and note update.

6.3 Partner Slot and Appointment Workflow

21. Partner logs in to dashboard.
22. Partner views own profile, slots, and appointment requests only.
23. Partner adds, edits, blocks, or bulk-creates slots.
24. Partner receives appointment request notification.
25. Partner accepts, rejects, or requests reschedule.
26. System updates appointment status and notifies admin/patient.

27. Partner marks appointment completed/no-show when appointment date passes.

6.4 Content and SEO Workflow

- 28. Content editor drafts blog, FAQ, city page, speciality page, or profile copy.
- 29. SEO fields are completed: title, meta description, slug, canonical, schema type, FAQ where relevant.
- 30. Admin reviews medical disclaimer sensitivity and no treatment guarantees.
- 31. Content is published after approval.
- 32. Sitemap updates automatically for public published pages.

7. Functional Requirements

7.1 Public Website Requirements

ID	Requirement	Acceptance Criteria	Priority
PUB-01	Homepage must include prominent healthcare search and appointment CTA.	User can search by doctor/speciality/city/location and reach relevant listing/profile pages.	P0
PUB-02	Header must support navigation to doctors, hospitals, clinics, specialities, blogs, partner page, and contact.	Navigation is responsive and accessible on mobile and desktop.	P0
PUB-03	Footer must include contact, legal links, partner link, quick categories, and trust/disclaimer statement.	All legal links are visible and indexable except private dashboard links.	P0
PUB-04	All public profile and landing pages must have primary CTA: Book Appointment and secondary CTA: WhatsApp Support.	CTA visible above the fold on desktop and sticky/accessible on mobile profile pages.	P0
PUB-05	Do not make medical guarantees or emergency care claims.	Copy review passes compliance checklist.	P0

7.2 Search and Listing Requirements

ID	Requirement	Acceptance Criteria	Priority
SEA-01	Search must support doctor, hospital, clinic, speciality, city, and area terms.	Relevant results appear with type labels and fallback suggestions.	P0
SEA-02	Doctor listing cards must show name, speciality, experience, location, fee if available, availability/status, verified indicator, and CTA.	Users can compare core details without opening every profile.	P0
SEA-03	Filters must be mobile-friendly.	On mobile, filters open in a drawer and do not block content permanently.	P0

SEA-04	Listing pages must support pagination or infinite loading with SEO-safe URLs.	Large listings do not degrade performance or Core Web Vitals.	P1
SEA-05	Empty states must be helpful.	No-results page suggests nearby city/speciality, WhatsApp support, or enquiry form.	P0

7.3 Doctor Profile Requirements

ID	Requirement	Acceptance Criteria	Priority
DOC-01	Profile must display verified identity information.	Name, speciality, qualification, experience, registration number if available, languages, gender, location, and consultation fee appear clearly.	P0
DOC-02	Profile must include appointment slot selector.	User can select a visible preferred slot and proceed to form.	P0
DOC-03	Profile must include trust and disclaimer elements.	Shows verified profile marker, privacy note, and appointment assistance disclaimer.	P0
DOC-04	Profile must support FAQs.	FAQPage schema can be generated when FAQs exist.	P0
DOC-05	Profile must avoid fake ratings/reviews.	No public rating shown unless review system is verified and linked to completed appointment.	P0

7.4 Hospital and Clinic Profile Requirements

ID	Requirement	Acceptance Criteria	Priority
HCP-01	Hospital/clinic profile must show facilities, specialities, address, gallery, and CTA.	Users understand services, location, and how to request appointment/enquiry.	P0
HCP-02	Hospital profiles must support linked doctors.	Admin can attach doctors to hospitals and show them on hospital page.	P0
HCP-03	Clinic profiles must support doctors/team and available slots where applicable.	Clinic page can convert to appointment request.	P0
HCP-04	Map/location details must be available.	Address and map link are present without exposing private patient data.	P0

7.5 Booking Requirements

ID	Requirement	Acceptance Criteria	Priority
----	-------------	---------------------	----------

BKG-01	Booking form must be short.	Required fields: name, mobile, city, preferred slot, consent. Optional: concern and email.	P0
BKG-02	Appointment status must start as Pending Confirmation.	No patient-facing auto-confirmation unless admin/partner confirms.	P0
BKG-03	System must validate phone number and consent.	Invalid submissions show accessible error messages and do not create appointments.	P0
BKG-04	System must prevent overbooking.	Selected slot must be active and capacity must not be exceeded.	P0
BKG-05	Booking confirmation screen must show next step clearly.	Patient sees that MarizFirst/partner will confirm and receives WhatsApp acknowledgement.	P0
BKG-06	Booking source must be tracked.	Appointment/lead stores source page, UTM, and profile type.	P0

7.6 Admin Panel Requirements

Area	Functional Requirements	Priority
Dashboard	Total appointments, pending, confirmed, cancelled, completed, no-show, leads, source performance, top partners, pending SLA warnings.	P0
Appointments	Filter by status/date/doctor/hospital/clinic/city/source; confirm, reschedule, cancel, complete, no-show, add notes; view notification status.	P0
Doctors	Create/edit profiles, fees, qualifications, registration number, media, verification, SEO fields, FAQs, active/inactive status.	P0
Hospitals/Clinics	Manage profile, gallery, facilities, city/location, linked doctors, booking CTA, active/inactive status.	P0
Slots	View partner slots, block slots, bulk slot creation, resolve conflicts.	P0
Partners	Create accounts, assign roles, manage plans, commissions, permissions, partner status.	P0
Leads	Lead status, source tracking, contact notes, export with permission control.	P0
Content	Blogs, categories, FAQs, homepage sections, static/legal pages.	P0
SEO	Meta title/description, slugs, schema settings, redirects, sitemap inclusion, canonical settings.	P0

Finance	Commission fields, listing plans, partner dues, payment statuses. No payment gateway required in Phase 1.	P1
Audit Logs	Record create/update/delete/status changes/export/login failures.	P0

7.7 Partner Dashboard Requirements

Area	Functional Requirements	Priority
Login	Secure partner authentication with scoped access.	P0
Profile management	Partner can edit own listing details; sensitive fields require admin review if configured.	P0
Slot management	Add single/bulk slots, block unavailable dates, manage capacity.	P0
Appointment requests	Accept, reject, request reschedule, mark completed/no-show.	P0
Patient details	Show only appointment-specific patient details after booking request; no unrelated lead access.	P0
Reports	Appointments by period, pending, confirmed, completed, no-show, source summary.	P1
Support	Partner can raise update/support request to MarizFirst admin.	P1

8. Appointment Status and Slot Logic

8.1 Appointment Status Model

Status	Meaning	Allowed Next Statuses
PENDING_CONFIRMATION	Patient submitted request; not yet confirmed by admin/partner.	CONFIRMED, RESCHEDULED, CANCELLED, LOST
CONFIRMED	Appointment is confirmed with partner/admin approval.	COMPLETED, CANCELLED, RESCHEDULED, NO_SHOW
RESCHEDULED	Original requested slot changed; patient/partner notified.	CONFIRMED, CANCELLED, LOST
CANCELLED	Appointment cancelled by patient, admin, or partner.	No default next state; new appointment can be created if needed.
COMPLETED	Patient visit completed.	Closed state.
NO_SHOW	Patient did not attend.	Closed state unless admin reopens manually.
LOST	Lead could not be converted or confirmed.	Closed state; reason required.

8.2 Slot Status Model

Status	Meaning	Rules
AVAILABLE	Visible for selection.	Can be selected if capacity remains.

HOLD	Temporarily reserved pending workflow.	Optional strategy; expires after configured time if no action.
BOOKED	Capacity full or slot confirmed.	Hidden or marked full publicly.
BLOCKED	Partner/admin marked unavailable.	Not selectable publicly.
EXPIRED	Past slot.	Not selectable; retained for logs.

8.3 Operational SLA

- Pending appointments should be acted on within 15-30 minutes during working hours.
- Admin dashboard must highlight pending appointments approaching SLA breach.
- If partner does not respond, admin should call partner and update status manually.
- Every status change must create audit log with actor, timestamp, old value, new value, and notes where applicable.

9. Data Requirements and Database Entities

Entity	Key Fields / Notes
User	id, name, email, phone, passwordHash/auth provider id, role, status, lastLoginAt, createdAt, updatedAt.
Doctor	id, userId, name, slug, specialityId, cityId, qualification, experienceYears, registrationNo, fee, bio, languages, gender, status, seo fields.
Hospital	id, partnerUserId, name, slug, cityId, address, facilities, description, gallery, status, seo fields.
Clinic	id, partnerUserId, name, slug, cityId, address, feeRange, facilities, gallery, status, seo fields.
Speciality	id, name, slug, description, icon, seoTitle, seoDescription, content sections.
City	id, name, slug, state, seoTitle, seoDescription, content sections.
Location	id, cityId, area, address, latitude, longitude, mapUrl.
AppointmentSlot	id, owner type/id, startAt, endAt, capacity, bookedCount, status.
Appointment	id, patientId, doctorId/hospitalId/clinicId, slotId, status, source, concern, adminNotes, partnerNotes, timestamps.
Patient	id, name, phone, email, cityId, consentAt, createdAt, updatedAt.
Lead	id, patientId, appointmentId, sourcePage, utmSource, utmMedium, utmCampaign, status.
Commission	id, appointmentId, partnerId, amount, status, dueDate, paidAt. Phase 1 may store fields without automated settlement.
ListingPlan	id, partnerId, planType, monthlyFee, startDate, endDate, status.
BlogPost	id, title, slug, excerpt, content, authorId, category, status, publishedAt, seoTitle, seoDescription.
Notification	id, recipientType, recipientId, channel, template, status, sentAt, errorMessage, providerMessageId.
AuditLog	id, actorId, action, entityType, entityId, beforeJson, afterJson, ipAddress, userAgent, createdAt.
Redirect	id, sourcePath, destinationPath, statusCode, active.
FAQ	id, ownerType, ownerId, question, answer, sortOrder, isPublished.

10. Roles, Permissions, and Access Control

Role	Access	Restrictions
Super Admin	Full system, settings, users, financials, audit logs.	Protected system actions require extra confirmation.
Admin	Manage listings, appointments, leads, slots, blogs, partners.	Cannot delete audit logs or change super admin ownership.
Content Editor	Blogs, SEO content, FAQs, images, static pages.	No patient data and no financial data.
Doctor Partner	Own profile, own slots, own appointment requests.	Cannot access other partner data or permanently delete patient records.
Hospital Partner	Hospital profile, linked doctors, slots/requests, reports.	Cannot access unrelated hospital/clinic/doctor leads.
Clinic Partner	Clinic profile, slots, appointments.	Cannot export all leads without admin permission.
Patient/Public	Browse public pages and submit appointment request.	No patient dashboard in Phase 1 unless added later.

10.1 RBAC Rules

- Every admin/partner API route must check role and ownership.
- Partners can only see records connected to their own account or assigned organization.
- Soft delete should be used for doctors, hospitals, clinics, patients, appointments, and partner records.
- Export actions must be permission-gated and logged.
- Login failures and sensitive updates must be logged.
- Least privilege must be applied to content editors and partner accounts.

11. UX/UI Requirements

11.1 Design Direction

The visual direction should be premium healthcare, not luxury real estate. Healthcare users need clarity, trust, readable information, visible next steps, and fast access to appointment support. The interface should use clean white surfaces, deep navy text, teal/blue accents, soft green success states, light gray boundaries, strong mobile cards, and accessible typography.

11.2 UX Rules

- Design mobile-first for 360px, 390px, 430px, tablet, 1366px, 1440px, and 1920px widths.
- Use 16px minimum body text for patient-facing content.
- Booking form must stay short and should not force login in MVP.
- Profile pages should have sticky bottom CTA on mobile: Book Appointment and WhatsApp Support.
- Appointment status must be explicit: Pending Confirmation, Confirmed, Rescheduled, Cancelled.
- Filters must collapse into a mobile drawer with clear Apply and Reset actions.
- Buttons must be thumb-friendly: minimum 44px height for tap targets.
- Avoid visual clutter, fake urgency, unrealistic guarantees, and excessive animation.
- Use skeleton states/loading states for listings and dashboards.
- Use error, empty, success, and pending states for every important workflow.

11.3 Accessibility Requirements

- All inputs must have visible labels, not placeholder-only labels.
- Keyboard navigation must work for search, filters, forms, modals, and dashboard actions.
- Focus states must be visible and high-contrast.
- Color contrast should meet WCAG AA for text and interface controls.
- Images must have meaningful alt text where informative; decorative images should be ignored by assistive technology.
- Error messages must be linked to fields and readable by screen readers.
- Do not trap keyboard focus in drawers/modals; focus must return to trigger after close.

12. SEO Requirements

SEO Asset	Requirement
Dynamic metadata	generateMetadata for doctor, hospital, clinic, city, speciality, and blog pages.
Sitemap	Dynamic sitemap from published public profiles, city pages, speciality pages, and blog posts.
Robots	Allow public pages; block dashboards, admin, partner, private APIs, staging URLs where relevant.
Schema	Use Physician, MedicalOrganization, LocalBusiness, BreadcrumbList, FAQPage where appropriate.
Canonical	Canonical URLs for city/speciality variations and filtered pages.
Internal linking	Doctor profile to speciality/city/hospital/clinic pages; city pages to relevant specialities and profiles.
Image SEO	Optimized sizes, alt text, descriptive filenames, lazy loading below fold.
Content quality	No medical advice claims; educational content should recommend consulting qualified professionals.

12.1 Keyword and Page Mapping

Page Type	Keyword Pattern	Example
City doctors	doctors in [city]	doctors in Gurgaon
Speciality city	[speciality] doctor in [city]	cardiologist in Gurgaon
Hospital city	hospitals in [city]	hospitals in Gurgaon
Clinic city	clinics in [city]	dental clinics in Gurgaon
Appointment intent	book doctor appointment in [city]	book doctor appointment in Gurgaon
Brand	MarizFirst appointment	book doctor through MarizFirst

13. Analytics and Event Tracking Requirements

Event	Trigger	Properties
search_performed	User submits search.	query, city, speciality, result_count, page_location.
listing_filter_applied	User applies listing filters.	filter_type, filter_value, page_type.
profile_viewed	Doctor/hospital/clinic profile viewed.	profile_id, profile_type, city, speciality, source_page.
slot_selected	User selects preferred slot.	slot_id, profile_id, profile_type, date, time.

appointment_form_started	User focuses first booking form field.	profile_id, source_page.
appointment_submitted	Appointment request created.	appointment_id, profile_id, source_page, status.
whatsapp_cta_clicked	WhatsApp support CTA clicked.	page_type, profile_id, location.
appointment_confirmed	Admin/partner confirms appointment.	appointment_id, partner_id, time_to_confirm.
appointment_rescheduled	Appointment rescheduled.	reason, appointment_id, actor_role.
appointment_cancelled	Appointment cancelled.	reason, appointment_id, actor_role.

14. Notification Requirements

Notification	Recipient	Trigger	Required Content
Acknowledgement	Patient	Appointment submitted.	Patient name, provider/profile name, requested date/time, Pending Confirmation status, support contact.
New request alert	Admin	Appointment submitted.	Patient details, profile, slot, source, CTA to admin appointment.
Partner request alert	Doctor/hospital/clinic	Appointment submitted for their profile.	Patient details allowed by scope, requested slot, accept/reject/reschedule action.
Confirmation	Patient	Admin/partner confirms.	Confirmed date/time, address, provider, instructions.
Reschedule update	Patient + partner	Slot changed.	Old slot, new slot, reason if available.
Cancellation	Patient + partner	Appointment cancelled.	Cancelled appointment details and support option.
Reminder	Patient	12-24 hours before confirmed appointment.	Confirmed time, address, arrival note, support contact.

14.1 Notification Rules

- Use official WhatsApp Business API for reliable production messaging.
- Store provider message ID, status, sent time, failure reason, and retry count.
- Failed notifications must appear in admin dashboard with retry option.
- Templates must avoid medical advice or treatment guarantees.

15. Technical Requirements

Layer	Recommendation	Reason
Frontend	Next.js App Router + TypeScript	SEO-friendly routing, server components, scalable architecture.
Styling	Tailwind CSS + design tokens	Fast responsive UI and consistent design system.
Forms	React Hook Form + Zod	Validation, error handling, maintainability.

Database	PostgreSQL	Reliable relational data for healthcare profiles, slots, appointments, leads.
ORM	Prisma	Typed queries, migrations, schema management.
Admin/CMS	Payload CMS or custom RBAC admin	Manage content, listings, users, appointments, SEO.
Auth	Credentials/email OTP or NextAuth/Clerk depending on budget/control	Role-based protected dashboards.
Notifications	Official WhatsApp Business API	Production-grade appointment communication.
Monitoring	Sentry + structured logs	Error tracking and debugging.
Hosting	Vercel + managed PostgreSQL	Fast deployment and scalable MVP infrastructure.
Media	Cloudinary or S3-compatible storage	Optimized profile/gallery assets.

15.1 API Requirements

Endpoint	Method	Purpose	Access
/api/search	GET	Search doctors, hospitals, clinics, specialties, cities.	Public
/api/appointments	POST	Create appointment request.	Public
/api/appointments/[id]	GET	Read appointment details.	Admin/Partner scoped
/api/admin/appointments/[id]/confirm	POST	Confirm appointment.	Admin
/api/admin/appointments/[id]/reschedule	POST	Reschedule appointment.	Admin
/api/admin/appointments/[id]/cancel	POST	Cancel appointment.	Admin
/api/partner/slots	POST	Create available slot.	Partner
/api/partner/appointments/[id]/accept	POST	Partner accepts request.	Partner scoped
/api/partner/appointments/[id]/reject	POST	Partner rejects request.	Partner scoped
/api/webhooks/whatsapp	POST	Receive WhatsApp delivery/status webhook.	System
/api/admin/doctors	POST/PATCH	Manage doctor profiles.	Admin
/api/admin/blogs	POST/PATCH	Manage blog posts.	Content/Admin

16. Security, Privacy, and Compliance Requirements

Risk	Control
Broken access control	RBAC middleware, ownership checks, permission tests, route protection.
Injection	Prisma parameterized queries, input validation with Zod, no raw SQL unless reviewed.
Sensitive data exposure	HTTPS, secure cookies, restricted exports, encrypted backups where feasible.
Spam/fake leads	Rate limiting, CAPTCHA/Turnstile, phone OTP optional if spam increases.
Admin misuse	Audit logs, least privilege, export restrictions, review

	process.
Partner data leakage	Partner-scoped APIs only; no global lead access.
Secrets leakage	Environment variables, no keys in repo, secret scanning.
Backup failure	Automated daily database backups and periodic restore test.

16.1 Required Legal and Trust Pages

- Privacy Policy.
- Terms and Conditions.
- Medical Disclaimer.
- Partner Terms.
- Data Deletion Request page or support email process.

Medical Disclaimer Direction

MarizFirst is an appointment assistance and healthcare discovery platform. It does not provide emergency medical care, diagnosis, treatment guarantee, or replacement for qualified medical advice.

17. Performance and Reliability Requirements

- Public pages should be optimized for Core Web Vitals, especially mobile LCP and CLS.
- Profile and listing images must be resized, compressed, lazy-loaded, and served via CDN.
- Listing pages must use pagination, cursor loading, or server-side filtering to avoid heavy payloads.
- Search must return fast enough for practical user experience; use database indexes on slug, city, speciality, name, and status fields.
- Dashboards must handle empty states, loading states, failed API states, and retry flows.
- Appointment creation must be transactional where needed to avoid duplicate or inconsistent data.
- System should log and surface notification failures instead of silently failing.

18. QA and Testing Requirements

Testing Area	Checklist
Unit tests	Validators, role checks, slot logic, status transitions, SEO helper functions.
Integration tests	Appointment create-confirm-cancel flow, partner accept/reject, notification queue.
E2E tests	Search -> profile -> slot -> form -> admin confirm -> patient notification state.
Responsive QA	Mobile 360/390/430, tablet, desktop 1366/1440/1920.
SEO QA	Meta tags, sitemap, robots, schema, canonical, redirects, internal links.
Security QA	RBAC bypass attempts, rate limits, input validation, protected routes.
Performance QA	Core Web Vitals, image sizes, listing pagination, cache behavior.
Operational QA	Admin can handle failed partner response, reschedule manually, and retry notifications.
Accessibility QA	Keyboard flow, focus states, labels, color contrast, form errors, modal/drawer behavior.

18.1 Critical Acceptance Scenarios

- A patient can search, open a doctor profile, select a slot, submit a request, and see Pending Confirmation.
- Admin receives the appointment in dashboard and can confirm it.
- Partner receives the appointment in scoped dashboard and can accept/reject/reschedule.
- Patient receives the correct WhatsApp notification at each major status change.
- Partner cannot access another partner's appointments through URL/API manipulation.
- Content editor cannot access patient data or financial data.
- Public pages generate correct metadata and sitemap entries when published.
- Spam form submissions are rate-limited or challenged.

19. Launch Plan and Milestones

Phase	Focus	Output
Phase 1: Product Foundation	Scope, roles, user flows, sitemap, UX wireframes, design system.	Clear MVP plan and approved UI direction.
Phase 2: Core Development	Next.js setup, database schema, public pages, profiles, booking form, admin basics.	Working public website and appointment request flow.
Phase 3: Operations Tools	Partner dashboard, slot logic, appointment status actions, notifications, audit logs.	Operational booking system.
Phase 4: SEO + QA	Metadata, schema, sitemap, performance, security, responsive QA, launch data.	Production-ready MVP.
Phase 5: Launch	Domain, SSL, analytics, Search Console, backups, first-week monitoring.	Live MarizFirst MVP.

19.1 Launch Checklist

Area	Requirement
Content	Launch doctors, hospitals, clinics, specialties, city pages, FAQs, and legal pages completed with real data.
Booking	Appointment creation, confirmation, reschedule, cancellation, completed/no-show flows tested.
WhatsApp	Templates approved, acknowledgement and confirmation working, failure logging visible.
SEO	Sitemap submitted, robots checked, metadata and schema validated.
Security	Admin/partner access verified, rate limits active, backups configured.
Performance	Core pages optimized for mobile speed and image performance.
Analytics	GA4/Search Console/conversion events configured.
Legal	Privacy, terms, medical disclaimer, partner terms, data deletion process live.
Operations	Admin SOP for pending appointments and partner follow-up ready.

20. Roadmap After MVP

Phase	Features
Phase 2 - Growth	Advanced filters, verified reviews, featured listings, partner billing, patient login, appointment history, email/SMS reminders, city-wise content expansion.
Phase 3 - Scale	Mobile app, AI appointment assistant for non-medical routing only, insurance/cashless support, diagnostic labs, treatment packages, CRM/call-center dashboard, teleconsultation if operations are ready.

21. Risks, Assumptions, and Open Decisions

21.1 Key Risks

Risk	Impact	Mitigation
Fake availability	Patient trust breaks if confirmed slot is unavailable.	Use Pending Confirmation and operational SLA.
Low-quality partner data	Poor SEO and conversion.	Admin verification checklist and content quality rules.
Slow confirmation	Users may abandon or complain.	Admin SLA dashboard, WhatsApp support, partner escalation.
Spam leads	Operational waste and partner dissatisfaction.	Rate limits, CAPTCHA, optional phone OTP.
Partner data leakage	Privacy and trust risk.	Strict RBAC, ownership checks, audit logs.
Overbuilding early	Time/cost increases before market proof.	Avoid app, EMR, teleconsultation, payments, AI diagnosis in Phase 1.

21.2 Assumptions

- Launch begins in one focused local market.
- MarizFirst admin team will actively manage confirmation quality during MVP.
- Partners may not reliably maintain real-time slots at launch.
- WhatsApp is the primary communication channel for appointment updates.
- SEO pages are an important long-term acquisition channel.

21.3 Open Decisions Before Development

- Final launch city and first specialities.
- Exact partner onboarding data fields and verification process.
- Whether patient phone OTP is required at launch or added after spam appears.
- Payload CMS vs fully custom admin decision.
- WhatsApp Business API provider and template approval timeline.
- Commission/listing plan rules and partner agreement terms.
- Whether partner profile edits require admin approval for all fields or only sensitive fields.

22. Definition of Done

- All P0 requirements implemented and tested.
- No patient data visible publicly or across unrelated partner accounts.

- Search, profile, booking, admin confirmation, partner action, and WhatsApp update flow works end-to-end.
- All public pages are responsive, accessible, and SEO-ready.
- Admin can manage launch content, profiles, appointments, partners, and statuses without developer help.
- Partner can manage own slots and appointment requests without accessing unrelated data.
- Audit logs exist for sensitive operations.
- Legal pages and medical disclaimer are live.
- Analytics and Search Console are configured.
- Backups, monitoring, and production environment variables are configured.

23. Appendix: Recommended MVP Copy Direction

Element	Recommended Copy Direction
Hero headline	Book appointments with trusted doctors, hospitals, and clinics near you.
Hero subheading	Search verified healthcare profiles, choose a preferred slot, and get appointment support through MarizFirst.
Primary CTA	Book Appointment
Secondary CTA	Talk on WhatsApp
Trust strip	Verified profiles Assisted confirmation Secure patient information No emergency-care claims
Pending confirmation text	Your appointment request has been received. MarizFirst or the healthcare partner will confirm the final slot shortly.
