

MARIZFIRST

UI/UX Brief - Dark Premium Healthcare Interface

Updated visual direction based on the approved dark glowing interface reference

Healthcare Appointment Discovery + Assisted Booking Platform

Version: UI/UX Brief v2.0 | Prepared for design, frontend, QA, and product execution

1. Final UI Direction Decision

This replaces the previous generic light healthcare look with the approved dark premium interface direction.

Final Direction: MarizFirst should use a dark navy/black premium healthcare interface with cyan/teal glow accents, glassmorphism cards, elegant serif hero typography, polished SaaS-style dashboards, and high-conversion capsule buttons.

The interface must feel attractive and premium like a serious healthcare marketplace, but it must still remain readable, trustworthy, accessible, and operationally clear. The visual mood should be closer to a modern health-tech product than a basic hospital directory.

Important constraint: Do not bring back discount/coupon positioning. The reference contains discount language, but MarizFirst product strategy says the platform must be trust-first, assisted-booking-first, and not discount-led.

2. Reference Interpretation: What to Copy and What to Avoid

Reference Element	Use in MarizFirst	Do Not Copy
Dark premium background	Use deep navy, black-blue gradients, subtle medical-tech glow, and clean section separation.	Do not make the UI so dark that text contrast fails or forms become hard to read.
Glowing cyan CTA buttons	Use capsule gradient buttons with soft cyan outer glow, arrow icon, and strong hover states.	Do not overuse glow on every element; reserve it for primary actions and active states.
Glassmorphism cards	Use translucent panels for hero widgets, search bar, doctor cards, hospital cards, and trust modules.	Do not reduce readability with too much transparency or busy backgrounds behind text.
Large serif hero headline	Use a premium display serif for hero and major section titles.	Do not use serif for small labels, forms, tables, or dense dashboard content.
Healthcare dashboard mockup	Use appointment/search widgets on the hero right side to explain the product visually.	Do not show unrealistic confirmed booking before admin/partner action.
20%/savings module in reference	Replace with trust/assisted confirmation/security messaging.	Do not show 20% discount, savings, or coupon-like panels.

3. Brand Personality and Product Feel

- Premium but not luxury-real-estate: healthcare trust must remain more important than visual drama.
- Futuristic but human: use modern dashboard visuals, but keep real people, doctors, and care language visible.
- Assisted and reliable: every booking step must communicate that MarizFirst helps confirm appointments.
- Secure and private: patient data protection should be visible through iconography, copy, and UI patterns.
- Fast and conversion-focused: the homepage must guide users quickly from search to doctor/profile to appointment request.

4. Visual System

4.1 Color Palette

Token	Hex	Usage
Background / Base Navy	#020B14	Main page background, footer, dark sections.
Deep Panel Navy	#061827	Glass panel base, cards, search area, dashboard mockups.
Elevated Card Navy	#0B2234	Doctor cards, hospital cards, specialty cards, popover cards.
Primary Cyan	#00D8FF	Primary CTA, active state, icon highlights, glow edges.
Teal Accent	#00B8C8	Secondary highlights, badges, link accents, small UI states.
WhatsApp Green	#25D366	WhatsApp icon and WhatsApp CTA only.
Text White	#FFFFFF	Main headline and high-priority text on dark

		background.
Soft Text	#B8C7D5	Supporting paragraph and muted labels.
Border Glow	#16445E	Subtle glass borders and separators.
Success Green	#2EE78A	Available Today, verified status, success states.
Warning Amber	#F7B84B	SLA warnings, required attention state.
Error Red	#FF5D73	Validation errors and destructive warnings.

4.2 Typography

Type Role	Recommended Font	Specification
Hero display	Cormorant Garamond / Playfair Display	64-76px desktop, 42-48px tablet, 34-40px mobile. High contrast white.
Section heading	Cormorant Garamond / Playfair Display	32-44px desktop, elegant, not overly decorative.
Body/UI font	Inter / Manrope	16-18px public body, 14-16px cards/forms, clear and modern.
Dashboard/data font	Inter / Manrope	12-14px labels, 14-16px values, strong numeric clarity.
Button text	Inter / Manrope SemiBold	14-16px, clear letter spacing, arrow icon alignment.

4.3 Background and Atmosphere

- Use dark navy to black radial gradients with subtle cyan glow behind the hero and CTA zones.
- Use a faint medical-tech grid, heartbeat line, stethoscope outline, or shield pattern only as background texture.
- Keep texture opacity low: 4%-12%. It should add depth, not compete with content.
- Use soft cyan glow behind primary hero dashboard widgets to create the approved premium mood.
- Avoid stock-photo-heavy clutter; cards and widgets should feel intentionally designed.

5. Button System - Exact Direction

Buttons are a core part of the desired UI. They should follow the same premium capsule style shown in the reference: glowing, rounded, tactile, clean, and highly visible.

Button Type	Visual Style	Specs	Usage
Primary CTA	Cyan/blue gradient capsule with soft outer glow and right arrow.	Height 52-58px desktop, 48-52px mobile; radius 999px; gradient #00D8FF to #087DD9; border 1px rgba(255,255,255,.18); shadow 0 0 24px rgba(0,216,255,.35).	Book Appointment, Continue Booking, Submit Request, Search.
Secondary CTA	Dark glass capsule with cyan border and subtle glow.	Height 50-56px; radius 999px; background rgba(5,18,30,.62); border 1px solid rgba(0,216,255,.32); text white.	Talk on WhatsApp, View Details, View All.
WhatsApp CTA	Dark glass capsule with green WhatsApp icon and white label.	Keep green only for WhatsApp icon or left accent; do not make the whole button neon green.	WhatsApp Support, Talk on WhatsApp.
Card CTA	Small cyan rounded button inside cards.	Height 38-42px; radius 14-999px depending card size; arrow icon at right.	Doctor card booking, hospital enquiry.
Danger/Cancel	Dark red outline or muted destructive style.	No glowing red unless destructive modal; require confirmation.	Cancel appointment, reject request.

Micro-interaction: On hover, primary buttons should lift 1-2px, intensify cyan glow, and shift gradient slightly. On active/tap, reduce scale to 0.98. Keyboard focus must show a visible cyan outline.

6. Homepage Layout - Exact Screen Direction

6.1 Desktop Layout

Section	Required UI Treatment	Conversion Purpose
Header	Dark glass sticky header, rounded large pill container, centered MarizFirst logo, left nav links, right WhatsApp Support + glowing Book Appointment button.	Immediate navigation and primary booking entry point.
Hero	Split layout: left copy and CTAs, right floating dashboard widgets. Use serif headline, small premium badge, two CTA buttons, trust items below.	Explain value fast and drive appointment action.
Hero visual dashboard	Use glass card UI showing search tabs, upcoming appointment, quick actions, and booking popover with date/time options.	Make assisted booking feel real and modern.
Trust strip	Icon cards: Verified Profiles, Assisted Confirmation, Priority Support, Secure Booking.	Reduce anxiety before search/booking.
Search strip	Wide glass panel: Search Doctor, Search Speciality, Select City, Search button.	Move user from inspiration to discovery.
Specialities	Horizontal icon-card grid, cyan line icons, dark elevated panels.	Fast browsing for common healthcare needs.
Featured Doctors	Four-card grid with verified badge, doctor photo, speciality, experience, fee, availability, Book Appointment button.	Convert high-intent users.
Top Hospitals	Image-led hospital cards with location, beds/specialities, rating/trust info.	Build marketplace depth.
Why MarizFirst	Dark panel with 4 compact trust cards + security illustration area.	Explain why users should book through platform.
Data privacy section	Glowing shield illustration with privacy/security features.	Reinforce patient data trust.
Health Guides	Blog cards with images, category tags, article title, date, reading time.	SEO, education, trust.
Footer CTA	Large glowing band with Book Appointment and Talk on WhatsApp buttons.	Final conversion capture.
Footer	Dark structured footer with patient links, provider links, company, support, app badges, social icons.	Navigation, credibility, SEO links.

6.2 Hero Copy - Recommended

Element	Copy
Eyebrow badge	PREMIUM HEALTHCARE MARKETPLACE
Hero headline	Book Trusted Doctors, Hospitals & Clinics
Hero subheading	Connect with verified healthcare providers, choose a preferred slot, and get assisted appointment support at every step.
Primary CTA	Book Appointment
Secondary CTA	Talk on WhatsApp
Trust item 1	Verified Profiles - All providers verified
Trust item 2	Assisted Confirmation - We help confirm your booking
Trust item 3	Priority Support - Human support when needed
Trust item 4	Secure Booking - Your data is protected

6.3 Hero Widget Rules

- Booking widget must show Pending/Continue Booking language, not final confirmed state unless confirmation has happened.
- Use doctor avatar, name, speciality, date selector, time slots, and Continue Booking button.
- Use tabs for Doctors, Hospitals, Clinics in the search widget.
- Include quick actions: Find Doctors, Find Hospitals, Find Clinics, Health Guides.
- Use cyan glow around active selected time/date, not bright distracting colors.
- Do not include consultation savings, discount applied, or 20% badge in the hero widget.

7. Component Inventory

Component	Visual Requirements	States Required
Header/Nav	Rounded dark glass container, centered logo, minimal links, strong CTA.	Default, sticky, mobile open, active link, keyboard focus.
Search Bar	Glass panel fields with icons and dark inputs.	Empty, filled, loading, results, no results, error.
Primary Button	Glowing cyan capsule with arrow.	Default, hover, active, focus, disabled, loading.
WhatsApp Button	Dark glass button with WhatsApp icon.	Default, hover, focus, disabled.
Doctor Card	Image top, verified badge, name, speciality, experience, fee, availability, CTA.	Default, hover, no image, unavailable, loading.
Hospital Card	Image top, name, city, beds, specialities, trust/rating line.	Default, hover, no image, loading.
Speciality Card	Cyan line icon, label, dark card, subtle hover glow.	Default, hover, active, disabled.
Appointment Widget	Floating glass panel with date/time options and CTA.	Slot selected, no slots, loading, invalid, pending.
Trust Card	Icon plus short label and one-line proof.	Default, hover.
Privacy Shield Section	Large security graphic, lock icons, feature bullets.	Static visual, responsive stacked mobile.
Blog Card	Image, category pill, title, date/read time.	Default, hover, no image.
Footer CTA Band	Glow container with primary and secondary CTA.	Default, hover, responsive stack.

8. Responsive Behavior

Breakpoint	Layout Rules
Desktop 1440-1920px	Max content width 1440px. Hero split 52/48. Four-card grids. Header nav fully visible.
Laptop 1280-1366px	Reduce hero title size, keep two-column hero, cards remain four columns if width allows.
Tablet 768-1024px	Hero stacks partially: text first, dashboard below or side-by-side reduced. Card grids become 2 columns. Search strip stacks into 2x2 layout.
Mobile 360-430px	Single-column layout. Header becomes logo + menu + Book button or sticky bottom CTA. Hero headline 34-40px. Search fields stack. Doctor/hospital cards become full width.
Sticky mobile CTA	On profile and booking pages show sticky bottom capsule buttons: Book Appointment + WhatsApp Support. Do not cover form fields.

9. Accessibility Rules for Dark UI

- White text on navy must meet WCAG AA contrast; muted text must not fall below readable contrast.
- Do not use cyan glow as the only focus indicator. Add a clear 2px focus outline.
- Appointment status cannot rely only on color; show explicit labels like Pending Confirmation, Available Today, Fully Booked.
- All form fields need visible labels, not placeholder-only labels.
- Tap targets must be at least 44px high on mobile.
- Animated glow should be subtle; respect reduced motion preference.
- Error states must be readable on dark background and connected to fields using aria-describedby.

10. Page-by-Page Design Rules

Page	UI Direction
Home	Full dark premium homepage exactly in the approved direction: hero dashboard, glow CTAs, search strip, cards, security section, footer CTA.
Doctors Listing	Dark search header, filters in glass sidebar/drawer, doctor cards in grid/list, clear availability labels, strong Book Appointment CTA.
Doctor Profile	Dark profile hero, doctor photo, verified badge, qualification, experience, fee, location, slot picker, sticky mobile CTA, FAQ section.
Hospitals Listing/Profile	Image-led premium cards, facility badges, linked doctors,

	enquiry/appointment CTA, map/address section.
Clinics Listing/Profile	Local discovery feel, clinic image, services/tags, doctors/team, slot request CTA.
Speciality/City Pages	SEO-focused landing pages with hero copy, doctor cards, FAQs, internal links. Keep design consistent but content-first.
Blog/Health Guides	Readable article cards on dark background. Article detail page should prioritize readability with a lighter content panel if needed.
Admin Dashboard	Dark operational dashboard with tables, filters, status badges, SLA alerts, and low-glow functional UI. Do not over-style operational tables.
Partner Dashboard	Simpler dark dashboard with slots, appointments, profile status, and clear action buttons.

11. Status and Badge System

Status	Visual Treatment
Verified	Small cyan/blue pill with shield/check icon.
Available Today	Green dot + text, restrained and readable.
Pending Confirmation	Amber/cyan neutral badge; should not feel like an error.
Confirmed	Green success badge with check icon.
Rescheduled	Blue badge with calendar/refresh icon.
Cancelled	Muted red badge, no glow.
No Show / Lost	Gray/red operational badge inside admin only.
SLA Warning	Amber badge in admin dashboard with time remaining.

12. Interaction and Motion

- Hero widgets can have very subtle floating movement, but no distracting animation.
- Cards should lift 2-4px on hover with cyan edge glow.
- Primary CTA hover should intensify glow and move arrow 3-4px to the right.
- Search results and filter changes should use skeleton loaders instead of page flicker.
- Mobile drawers should slide smoothly and return focus to the opening trigger.
- Respect prefers-reduced-motion by disabling glow pulses and large animations.

13. Content Tone and Microcopy

Context	Use This Tone	Avoid
Hero	Confident, simple, trust-first.	Discount-first, urgent, exaggerated.
Booking form	Clear, reassuring, step-based.	Complicated medical wording.
Pending state	Your request has been received. MarizFirst or the provider will confirm shortly.	Your appointment is confirmed before approval.
Empty search	No exact match found. Try another speciality or talk to our support team.	Dead-end empty state.
Privacy	Your information is protected and used only for appointment support.	Vague claims without meaning.
CTA	Book Appointment, Continue Booking, Talk on WhatsApp.	Claim discount, get offer, limited time.

14. Figma Handoff Requirements

- Create a dedicated page: 00 Brand Direction - Dark Premium Healthcare.
- Create reusable components for buttons, cards, badges, inputs, search fields, modals, drawers, and table rows.
- Define color and typography tokens before designing all screens.
- Provide desktop, tablet, and mobile frames for homepage, doctor listing, doctor profile, booking flow, admin appointment inbox, and partner slots page.
- Annotate hover/focus/disabled/loading/error states for all interactive components.
- Export icons as SVG and imagery in optimized dimensions.
- Do not hand off static screenshots only; developers need components, spacing tokens, responsive rules, and states.

15. Developer Implementation Notes

Area	Implementation Direction
CSS/Tailwind tokens	Create semantic tokens: bg-base, bg-panel, bg-card, border-glow, text-primary, text-muted, cta-primary, status-success.
Buttons	Build button variants once: primaryGlow, secondaryGlass, whatsappGlass, cardAction, danger.
Glass cards	Use reusable CardShell with backdrop blur, dark translucent background, border, and optional glow.
Performance	Do not use heavy animated backgrounds. Use lightweight gradients/SVGs/CSS pseudo-elements.
Images	Use optimized WebP/AVIF, fixed aspect ratios, and placeholder states to prevent layout shift.
Accessibility	Build keyboard/focus states from day one; do not add accessibility after UI completion.
SEO	Keep public content server-rendered; do not hide critical headings/text inside images.

16. Quality Checklist

- Homepage visually matches the approved dark premium reference direction.
- No 20% discount, coupon, savings, or offer-led module appears anywhere.
- Primary buttons are glowing cyan capsules with right arrow and strong hover/focus states.
- Secondary WhatsApp buttons are dark glass with WhatsApp icon and restrained green accent.
- Hero contains a dashboard/booking widget visual, not just a stock photo.
- Cards use consistent dark glass styling, spacing, and border glow.
- Mobile layout remains usable and does not simply shrink desktop UI.
- Search, booking, and CTA actions are visible above the fold.
- All text remains readable against dark backgrounds.
- Appointment status copy follows hybrid booking model: Pending Confirmation until admin/partner approval.

17. Final Design Statement

Approved UI Direction: MarizFirst should look like a premium dark health-tech marketplace: cinematic navy background, cyan glow, elegant serif hero typography, glass dashboard widgets, capsule CTA buttons, verified healthcare cards, privacy-first trust sections, and a complete conversion-focused homepage. The UI must be attractive, but it must also remain trustworthy, accessible, SEO-friendly, and aligned with assisted appointment confirmation.
